

## Mobile DC Fast Charger

Compact, high-power DC charger, providing rapid relief for stranded EVs with depleted batteries.

### 10 Miles of Range in 10 Minutes

Delivers 25 kW DC fast charging, adding 10 miles of range in just 10 minutes to most electric vehicles.

### Compatible with All EVs

Supports CCS1 and NACS connectors, with 400V and 800V battery compatibility for passenger and commercial vehicles.

### ICE-Compatible Installation

Natively integrates with Harbinger EVs or with gas and diesel vehicles using a Harbinger battery to charge stranded cars.

### Built for Real-World Use

Waterproof, vibration-isolated enclosure with built-in thermal management for rugged environments.

# Mobile Charger Features and Specifications

## Charger Specifications

Power & Voltage	25 kW DC fast charging, supports 400V and 800V EV systems
Charge Connectors	CCS1 and NACS (Tesla-compatible)
Input Source	Powered by onboard Harbinger battery pack
Typical Use Capacity	Up to six 10-min sessions, ~10 miles of range each
Thermal Management	Passively cooled
User Interface	Integrated display (HMI)
Connectivity	Powertrain CAN, I/O, and power connectors
Availability	Coming soon

## Battery Specifications

Usable Energy	35 kWh
Voltage Range (Operable)	520V – 800V
Cooling System	50/50 Water/Ethylene Glycol
Protection & Safety	IP6k9k, UN 38.3 and UN ECE R100 certified

## Built for Roadside V2V Charging

The Mobile DC Fast Charger meets the growing need for mobile EV charging in the field. Designed for fleet and roadside assistance, it enables quick range recovery for stranded vehicles.

### Two integration pathways:

- **ICE Tow Truck Package:** Today, tow trucks called to assist EVs with a depleted charge have only one viable option: tow the vehicle to the nearest charging station, where the driver may have to wait for a charger to become available. With the Harbinger Mobile DC Fast Charger, a tow truck operator can minimize on-scene time by charging the depleted EV on the spot—freeing up the tow truck to assist more vehicles, faster.
- **Harbinger Chassis Integration:** In fleet operations, vehicle availability is critical to success. When issues arise, vehicles need to be serviced quickly—and third-party roadside assistance isn't always immediately available. With the Harbinger Mobile DC Fast Charger, a Harbinger chassis equipped with this option can assist another EV and get it back on the road in as little as 10 minutes.

Specifications are subject to change without notice.
